 Can Tho City

EDUCATION

Greenwich of University
software engineer
2021 - 2025

SKILLS

Programming language: APEX, Java, C#, PHP, HTML, CSS.
Database: My SQL, SQL server, Firebase.
Frameworks: Spring boot, ASP.NET, MAUI.NET, Visual Force.
Other tools: Github, Git Desktop, Jira, Salesforce.

CERTIFICATE

VSTEP B2 Certificate (English)
BTEC Certificate (Computing)
Software manual testing (Udemy)

SOFT SKILLS

Team work
Project management

HOBBY

Badminton
Reading

HONG PHUOC

Tester intern

CAREER GOALS

I am passionate about testing software to ensure high-quality applications that meet client requirements. I have been focusing on manual testing to maintain software quality, and in the future, I aim to take on responsibilities in automation testing to expand my skills and contribute more effectively to software development.

PROJECTS

- Academic manage system 2/2024 - 5/2024**
Quantity of member: 3
Role: Developer, Tester
Target Audience: School Managers
Project Description: The project aimed to support teachers in managing students' work efficiently. I was responsible for designing the user interface, handling data model flow within the system, and ensuring all features functioned correctly.
Conclusion: Gained valuable knowledge and experience in the Scrum working methodology.
Technologies: Spring Boot, Thymeleaf, Java, JavaScript, MongoDB
Github: <https://github.com/TruongDuongHongPhuoc/COMP-1640.git>

- Android Yoga class management 11/2024 - 12/2024**
Quantity of member: 1
Role: Developer, Tester
Target audience: Yoga class managers
Project Description: Developed separate client and admin applications to support real-time management of yoga classes. The admin side was built using Java with integration of both SQLite and Firebase databases. The client side was developed with MAUI.NET and connected to the Firebase database for real-time updates.
Conclusion: Gained valuable knowledge in developing and integrating multi-platform applications.
Technologies: java, C#, MAUI.NET , Firebase database, SQLite
Github: <https://github.com/TruongDuongHongPhuoc/Android-std.git>

Library Management - commercial web 8/2023 - 10/2023

Quantity of member: 2

Role: Developer, Tester

Target audience: library manager

Project Description: I contributed to handling the data model flow, designing the user interface (UI), and developing core features such as file upload, search, and category management. Additionally, I ensured the overall quality and performance of the application.

Technologies: C#, ASP.NET, SQL server.

Conclusion: Gained valuable knowledge in collaborating within a small team and effectively using GitHub for version control and project management.

JRP Game develop - YoLoV8 10/2024 - 12/2014

Quantity of member: 1

Role: Developer, Tester

Target audience: Teenager.

Project Description: The project aimed to enhance user experience by integrating computer vision technology. I used Python and Unity for development and implemented the User Datagram Protocol (UDP) for data transmission between systems.

Conclusion: Gained invaluable knowledge in game development, working with pre-trained models, and utilizing various design tools.
