Profiles

 Sac Kda

Summary

Continuously learn to improve knowledge and experience in. Desire to experience and work in a professional working environment. Dedication and effort to bring value to the company and have the opportunity for promotion.

Projects

Medical Care Provision   **8/2024 - 11/2024**
Position: Full-stack Developer

The website supports scheduling medical examinations for patients, integrating medical records and the ability to communicate with doctors for consultation as well as providing a diagnostic and prescribing environment for doctors. I did everything from accessing the database in BE as well as designing and adjusting the interface in BE so that everything in the project was complete. Besides, I also approach and become proficient in using API in this project.

Team size: 1 **Target Audience:** Patient, Doctor.

Technology: Reactjs, Nodejs(Express), MySQL

Conclution: Successfully build an API website and understand its operating principles. Besides, successfully building a booking system with multi-dimensional and in-depth perspectives.

Link BE: https://github.com/ThachSacKda/MedicalCare.git

University Comp1640   **3/2024 - 4/2024**
Position: Full-stack Developer
🔗 https://github.com/KhoaHN612/COMP1640.git

Website supports submitting and managing assignments for students in a university environment. I built the project based on the requirements as a fullstack and tested the errors the team encountered then came up with solutions and resolved it.

Team size: 5 **Target Audience:** Student, Mentor.

Technology: ASP.Net, MySQL

Conclution: Improve teamwork ability and skills to test all project functions carefully. Improve your ability to solve bugs that you encounter during the project construction process. Know the project implementation and development process based on Agile/Scrum.

Projects

FPT Book **6/2023 - 8/2023**

Position: Full-stack Developer

🔗 https://github.com/FPTBookk/ASPCoreWeb.git

The website supports the management and sale of books in the FPT system. I have implemented database construction and worked with projects based on the MVC model.

Team size: 2 **Targer Audience:** Customer

Technology: ASP.Net, SQL Server

Conclution: I have approached and learned the method of building projects based on the MVC model as well as the ability to build projects from the initial steps such as setting up the environment and designing the database.
